[Price list of Hemlock]

March 3, 1949

Please excuse the delay. This is a new venture and things had to get organized.

The following varieties are available for the spring of 1949; all three years old, some grafts, some cuttings:

- Var. Bennett (sometimes called "minima") \$2.00 each
A beautiful, spreading plant with almost horizontal branching. Nearly twice as broad as high. The foliage is a dark, bright green color with a graceful, fanlike arrangement of branchlets. Intermediate in rate of growth. The original plant is on a property belonging to Allison Stern, near Eatontown, New Jersey.
- Var. Boulevard \$1.50 to \$2.00 each, depending on size
A compact, slow-growing tree with exceptionally dark green leaves. The leaves are long and closely set and the inner branchlets are drooping. The oldest known plant is in the Hemlock Arboretum, a graft from the Boulevard Nurseries, Newport, Rhode Island.
- Var. Callicoon \$2.00 each
A graceful, spreading plant with arching branches. Nearly twice as broad as high. The foliage is good and the rate of growth moderately fast. The original plant is in the Curtis Nurseries, Callicoon, New York.
- Var. Dwarf Whitetip (sometimes called albo-spicata) \$2.50
A graceful, broad-conical dwarf. The leaves of the late spring and summer growth are whitish in color, tending to fade in the fall. The original plant is in the Morris Arboretum, Philadelphia, Pennsylvania.
- Var. Von Helms Dwarf \$2.00 each
A dwarf variety, about as broad as high, with leaves closely set and not in two ranks. The original plant is in the Hemlock Arboretum, a seedling from the nursery of William Von Helms, Monsey, New York.

Other distinctive varieties are available in very limited quantities. Upon request, one plant each of the number of varieties you indicate, of types unlike any you are ordering above, will be included, with appropriate descriptions. \$2.00 each. Thanks for your interest.

Very truly yours,

Wm. C. Swartz, Inc.
200 BROADWAY
NEW YORK 1, N.Y.

March 2, 1949

These enclose the delay. This is a new venture and things had to get organized.

The following varieties are available for the spring of 1949, all three years old, some green, some orange.

Var. *Herbert* (sometimes called "Minis") \$2.00 each

A beautiful, spreading plant with almost horizontal branching. Nearly twice as broad as high. The foliage is a dark, bright green color with a glossy, waxy surface. The original plant is on a property belonging to William C. Swartz, Inc., New York.

Var. *Boulevard* \$1.00 to \$2.00 each, depending on size
A compact, slow-growing tree with closely set green leaves. The leaves are long and closely set and the plant branches out freely. The original plant is in the Herlock Arboretum, a gift from the Herlock Foundation, Newport, Rhode Island.

Var. *Callison* \$2.00 each
A beautiful, spreading plant with arching branches. Nearly twice as broad as high. The foliage is a good green color and the rate of growth is moderately fast. The original plant is in the Callison Nursery, Callison, New York.

Var. *White* (sometimes called *albo-herbert*) \$2.00 each
A beautiful, broad-leaved plant. The leaves of the plant are a pale green color and are white in color, sending out a strong, sweet odor. The original plant is in the Herlock Arboretum, Philadelphia, Pennsylvania.

Var. *Von Helms* \$2.00 each
A dwarf variety, about as broad as high, with leaves closely set and not in two ranks. The original plant is in the Herlock Arboretum, a seedling from the nursery of William C. Swartz, Inc., New York.

Other distinctive varieties are available in limited quantities. Upon request, a list of varieties you indicate, or the number of varieties you indicate, will be included in the ordering above, \$2.00 each. Thanks for your interest.
